

BULLIONBLOCK is a digital global payment ecosystem and stable currency (stablecoin) mobile e-Wallet App

BULLIONBLOCK is a new Fintech innovation that brings together the historically assured security and intrinsic value of physical Gold and Silver Bullion with the digital security, speed and privacy of transactions that only decentralized Blockchain technologies provide.

In response to the collapse of the financial system now known as the 2008 GFC, Satoshi Nakamoto invented a worldwide transactional ecosystem with inherent procedural trust - Blockchain Technology. Blockchain technology is an exciting, disruptive, decentralized and self-regulated financial system free from abuse, fraud, and unwanted political influences.

The BULLIONBLOCK business fintech model is powered by Blockchain technology and designed to protect the customer currency account with physical Gold and Silver Bullion stored in Singapore and the Cayman Islands, along with a worldwide delivery system through Strategic Wealth Preservation Ltd ('SWP').

Our Bullion Blockchain based solution, titled BULLIONBLOCK, is a digital global payment ecosystem that provides a mobile App which offers a stable currency (stablecoin) e-Wallet.

People's money should be tamper-proof, stable in value - and that's what BULLIONBLOCK will deliver.

The world is in the tenth year of a continued broad-base growth cycle and all market valuations remain very high by historical levels. Events such as the 1930's Great Depression and the 2008 Global Financial Crisis demonstrate that all fiat currency systems are prone to failure.

Today, currencies are created in large quantities by banks and governments at faster rates than goods and services are produced and brought to the market. The QE experiment and the continued expansion of the money supply has resulted in rising global prices of goods and services and has also created worldwide asset bubbles.

The global markets are starting to contract with signs of future aggressive and violent movements. Many of the world's high profile economists have begun warning of the global unsustainable debt levels and the extended contraction persisting in many parts of the world economy.

BULLIONBLOCK is a strategically designed bullion-backed digital financial preservation system to shield wealth against global economic volatility. The BULLIONBLOCK platform is an inflation hedge that protects and preserves the fiat currencies purchasing power.

So, if a bank holiday is declared in your country, or the market shuts down and fiat currencies depreciate - your money is secured!

In 2019, BULLIONBLOCK will launch a blockchain decentralized global financial technology ecosystem backed by physical bullion - the paradigm shift in money transactions - enabling anyone from anywhere to manage their money from any device.

Send & Receive Money

BULLIONBLOCK will offer the lowest fees worldwide for people to send money to their families, and for businesses to pay international suppliers and accept payments

Protect Your Money

BULLIONBLOCK protects money by moving it out of the broken-down global debt-driven monetary systems and into a stable-digital currency.

Make & Accept Payments

BULLIONBLOCK enables easy, instant and secure global payments from any device, while also protecting the customer account from market volatility and inflation-prone fiat currencies.
