

# BORDERLESS DIGITAL PAYMENT GATEWAY

## Blockchain Powered & Bullion Backed – redefining financial services for people and businesses

BULLIONBLOCK is a fintech innovation that brings together the historically assured security and intrinsic value of physical gold and silver Bullion with the digital security, speed and privacy of financial transactions that only decentralized Blockchain technologies offer – the future of the payments and remittance is digital.

The customer-centric borderless mobile Wallet inclusive ecosystem is designed to provide beneficial services for all members of all communities regardless of geographical location or political governance.

The Wallet App enables seamless chat with other users which can handle millions of concurrent chat users and crossborder payments and settlement of transactions on-chain, making the current banking constraints and costs unnecessary and avoidable.

BULLIONBLOCK is a registered company in Singapore, the UK, Australia, Hong Kong and the USA. Our company promises to respect the laws and cultures of all other countries worldwide within the compliance and regulations of all jurisdictions of our business operations.

Under the framework and strategy of the Belt and Road Initiative from the People's Republic of China, BULLIONBLOCK will create infinite opportunities for business, plus an advantageous environment for our users and partners in which to prosper.

BULLIONBLOCK will deliver fast and secure remittance and payments transactions. The company business plan aims to service the 'One Belt, One Road' corridor from Asia to Europe - Beijing to Berlin and beyond.

Our company has developed a seamless inclusive frictionless real-time payments platform that anyone can use to embrace the digital evolution in both fiat currencies, and cryptocurrencies as real-world assets.

The current artificial geographical restrictions, including the need for traditional bank accounts can be eliminated using the BULLIONBLOCK fintech ecosystem.

## Bullion-Blockchain based solution, titled BULLIONBLOCK, a digital global payments mobile Wallet App

Historical events such as the 1930's Great Depression and the 2008 Global Financial Crisis demonstrate that all fiat currency systems are prone to failure.

Today, currencies are driven by debt and created in large quantities by banks and governments at faster rates than goods and services are produced and brought to the market.

The QE experiment and the continued expansion of the money supply along with zero and very low interest rates has resulted in rising global prices of goods and services and also created worldwide asset bubbles across all markets.

The global markets are going to contract with aggressive and violent movements in the very near future. Many of the world's best economists have begun warning of market bubbles, debt issues and an extended contraction persisting in many parts of the global economy.

BULLIONBLOCK is a strategically designed bullion-backed digital money-preservation system to shield your wealth against a market crisis, and global economic volatility.

The BULLIONBLOCK platform is an inflation hedge that protects and preserves your purchasing power. So, if a banking crisis is declared in your country, or the market shuts down and fiat currencies depreciate – your money is secured!

Other factors like a downturn in the global economy have been accounted for and used to impact the business positively in our operational planning; therefore, with the stable money flow forecasts, the business model will not stretch to match a decline in the global economy and or growth.

In 2020, BULLIONBLOCK will launch the blockchain decentralized global financial technology ecosystem – the paradigm shift in money transactions – enabling anyone from anywhere to manage their money from any device.

“ Just as Airbnb completely upended the travel and hospitality business, and as Uber disrupted the Taxi industry... BULLIONBLOCK will do likewise to the Financial Services and Remittance industry”
